

# PYTHON LEARNING FOR KIDS

## Group Members

Name	ID
Mahmud Ahmed	1431000642
Md. Tamim Hasan	1521032042
Lamia Rahman	1711048642

# What is the Idea?

- A web application to teach children basic programming
- Teach children about the basic of the python coding languages.
- Children or Kids starting from the age 7+ can learn from here.

## Why did you select it (what of it attracted you most)?

- As the world is moving towards digitalization, so everyone must learn the basic of some coding.
- Kids learn faster at younger age, so programming at early stage will make better competitive programmer for future.

# How will you do it?

- This will be a web application based on the the JavaScript, PHP and the basic HTML 5 and CSS styling.
- Using a suitable framework, using the MVVM, or MVC any one of the model for the layout of the project.
- This project will be done and progressed from all the different group members.
- This project will cover the basic learning methods of the python programming, basic algorithms, programming concepts and others.

# What will you deliver at the end?

- We target to deliver a user friendly and a kid friendly site for learning Python programming.
- Creating a beautiful UX that will make learning fun and informative.
- Make language service for different language especially Bangla.
- A product that will be a startup worthy and will also be beneficial to school system if succeeded.
- Make feature oriented that's targeted towards kids.
- Aim to make another Android app for this project.
